

CRYPTOCOIN

THE GOLDEN REVOLUTION

TRANSPARENCY · SECURITY · GAMIFICATION

WHITEPAPER

2025 EDITION

cryptocoin.io

Executive Summary

CrypCoin is a community-driven project that combines gamification, transparency, and security on-chain. Core pillars include the Enemy Vault & Jackpot (prize distribution backed by verifiable randomness), a presale-only staking program with a decreasing APY schedule, and CrypShield, a decentralized platform to surface and mitigate DeFi risks (honeypots, malicious contracts, phishing).

Introduction

CrypCoin addresses common blockchain pain points—opacity, scams, and unchecked inflation—by pairing a fun, narrative-driven experience with verifiable transparency. The project evolves from a meme coin narrative to a practical DeFi ecosystem rooted in security and community incentives.

Problem & Mission

Problems: honeypots and hidden taxes; unlimited inflation; opaque smart contracts; phishing; and fake liquidity.

Mission: verifiable on-chain transparency; healthy gamification via Enemy Vault; real security utility through CrypShield; and progressive community governance (DAO).

Core Mechanics

Enemy Vault & Jackpot

- 3% of every buy is allocated in USDT to the Vault.
- Each enemy has an HP target; when defeated, the Vault pays out to 5 winners via Chainlink VRF.

Tickets

- 1 ticket per \$10 spent.
- Tickets determine eligibility for jackpots.

Presale-only Staking

- Options: Buy or Buy+Stake during presale.
- Rewards accrue for 24 months from the presale start; with an auto-decreasing APY as the presale progresses.

Unlocks & Rewards

- Purchased tokens: claimable at TGE + 7 days.
- Staking rewards: claimable from TGE.

CrypShield — The Cornerstone

CrypShield is a decentralized security layer for CrypCoin's ecosystem. It blends automatic contract scans with community reporting and analyst validation (reputation-backed), and exposes results via a public badge and API. Gamification rewards contributors who enhance security. Roadmap phases: MVP → Integrations → Multichain & full adoption.

Tokenomics

Item	Detail
Ticker	\$CRYP
Network	Polygon PoS (Chain ID 137)
Total Supply	75,000,000,000 (burnable)

Category	Allocation	Rationale
Presale	30%	Initial distribution & liquidity of holders
Staking Pool	30%	Incentivize long-term alignment
Treasury (SAFE multisig)	20%	Operations & strategic growth
Liquidity	10%	DEX depth & stability
Marketing/Partnerships	5%	Awareness & ecosystem growth
Team (vested 12–24m)	5%	Sustainable development

* Enemy Vault Funding (clarification)

- A fixed 3% buy fee is collected in USDT and routed to the Enemy Vault.
- This fee applies to market buys only; it is not a token allocation and does not alter total supply nor the 30% presale bucket.
- 5 winners per enemy are selected via Chainlink VRF once the HP target is reached.
- Eligibility: buyers only (staking positions do not generate tickets).
- Tickets: 1 per each \$10 spent (USDT equivalent).

Rules

- Presale tokens unlocked at TGE + 7 days
- Staking rewards claimable from TGE
- Staking available only during presale

Roadmap

Phase 1 — Genesis of Chaos: Token launch, purchase panel, first enemies, Enemy Vault.

Phase 2 — War Ignites: Presale-only staking, enemies 1–5, awareness.

Phase 3 — Power Unleashed: Enemies 6–10 + Mega Boss, DAO Lite, DEX listings, Vaults 2.0.

Phase 4 — The Shield Rises: CrypShield, multichain expansion, full DAO governance.

Transparency & Security

- Contracts verified on Polygonscan
- Treasury managed by SAFE multisig
- Chainlink oracles & VRF
- Public reports & DAO governance
- Audits at every major phase

Long-Term Vision

Three-stage evolution:

- 1) Enemies & Gamification → community engagement
- 2) DAO Governance → decentralized decision-making
- 3) CrypShield Expansion → security & transparency at scale

Disclaimer

This document is for informational purposes only and does not constitute financial, legal, or tax advice. Buying \$CRYP involves high risk, including the potential loss of capital. CrypCoin is not a security or investment product, and no guarantees of return are offered. Features and allocations may be modified through DAO governance or market conditions. Always perform your own research (DYOR).

CrypCoin — At a Glance

Ticker: \$CRYP

Chain: Polygon PoS (Chain ID 137)

Supply: 75,000,000,000 (burnable)

Utility: Enemy Vault & Jackpot · Presale-only Staking · CrypShield (security)

Treasury: SAFE multisig · Chainlink VRF

Transparency Checklist ■

- Contracts verified on Polygonscan
- SAFE multisig treasury (signer policy published)
- Chainlink VRF for randomness
- Presale staking & APY decay schedule public
- DAO governance & snapshot roadmap
- Public audits per phase

Glossary (Quick Reference)

- TGE: Token Generation Event (unlock rules).
- VRF: Verifiable Random Function (Chainlink randomness).
- SAFE (Multisig): Treasury control via multiple signers.
- HP (Enemy): Funding goal per enemy before jackpot release.
- DAO Lite: Initial governance/voting system.
